More DXN ADVANTAGES

Inline Configuration

Press to interrupt
circuit

Contact Technology

Safety Features

Easy Lockout/Tagout

Push-Button Circuit Disconnection

DXNs are suitable for 'current interrupting' up to their rated amperage and hp. A press of the pawl safely disconnects the circuit, even under full load, and ejects the plug to the off position. **Note:** DXNs are not 'switch-rated' and do not eliminate the need for a switch in the circuit.

Inline (Cord-to-Cord) Configurations

Quickly and easily connect and disconnect temporary pumps, heaters, lighting, motors and other equipment.

Power and Control in One Connection

Optional auxiliary contacts allow users to control motor drives, communicate alarms, or monitor process parameters through the power connection.

Spring-Loaded, Silver-Nickel Butt Contacts

Ensure optimal contact pressure and superior electrical performance over thousands of operations, even in harsh environments.

Easy Lockout/Tagout Compliance

Standard provisions on the plug make LOTO simple and optional provisions on the receptacle allow it to be locked out or locked in the connected position to prevent unintended disconnection.

Dead-Front Safety Shutter

Prevents exposure to live parts and other electrical hazards.
