Highlighted Feature

Receptacle Lockout Hole

All DSDC models are provided with a lockout hole in the pawl. This feature allows locking of the receptacle to prevent accidental disconnection of the plug under load.

Operating Instructions

When a DSDC is under load the receptacle should be locked to prevent disconnection.

If the DSDC is NOT under load, it can be disconnected by pressing the pawl.

A quarter turn of the plug allows it to be totally withdrawn from the receptacle. This is done in complete safety as the circuit is already de-energized.

The plug and the receptacle are separated. The safety shutter prevents access to live parts.

5 To reconnect, insert plug into receptacle, rotate 30° clockwise, and apply insertion force.

Jumpers provided on 600 VDC and 750 VDC models

Jumpers are required on all 600 VDC and 750 VDC models as a safety precaution to split the arc in case of accidental disconnection under load. Plugs and receptacles are provided with jumpers installed. Receptacles utilize a jumper between N and L3 poles. Plugs utilize a jumper between L2 and N poles.

! See pages 231-240 for detailed information on these options

INSTALLATION ACCESSORIES

* M3FS base measures approximately 4.2" x 2.7". Due to the variation in sizes of FS boxes, please verify that your FS box matches our dimensions, if not call Customer Service for other solutions.
** 70° boxes do not have pre-drilled entry locations. Contact Customer Service if factory drilling is required.

* Recommended for all assembly applications, for easier connector closure.
** An easy closing mechanism is standard on DSDC9 and DSDC2.
